

# Rosebel Slab

## SPECIFIC DETAILS

A

B

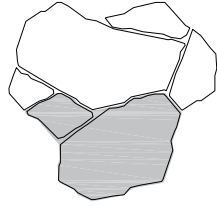

2 sizes of slabs, each with a different texture

# ROSEBEL SLAB

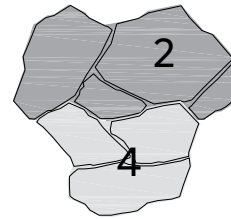

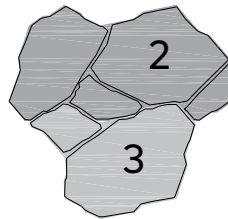

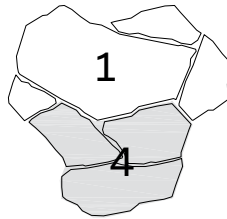

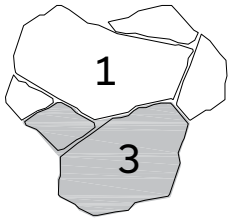

## INSTALLATION OF SLABS

BASIC PRINCIPLES: build a duo (pair) using both available slabs to reproduce a paving surface more accurately :

Vertical linear  
(one under each other)

You can create 4 different duos (pairs) using four different formats: 1-3, 1-4, 2-3, 2-4

IF PLACED RANDOMLY, YOU CAN CREATE THE DESIRED PATTERN

The slabs can be turned on themselves with a 120° angle (1/3 turn) in one way or the other, then put in place at 30° one from the other. This will give less linear repetition of the joints.
